

How to give your Tattoo the Best Outcome.

1. Take the protective dressing off after 3/4 hours.
2. Wash the tattoo thoroughly with foam/lather and lukewarm water till the skin feels normal continue doing this once a day for the first week after getting the tattoo.
3. Dab the tattoo dry with a clean Towel/Tissue/Handkerchief.
4. Apply a thin coat of the ointment suggested to you by the artist, continue doing so for the next one week for at least twice a day.
5. Discontinue the ointment and switch to a thin coat of mild moisturizer after a week and keep the tattoo as moist as possible for at least 3 weeks.
6. Avoid itching, scratching or picking on the scabs during this period.
7. Avoid exposing the tattoo to too much direct sunlight.
8. DO NOT enter the swimming pool or sea water for at least a month as it can destroy your tattoo completely.
9. Your tattoo post healing completely tones down 3 tones and will look a little lighter from the time its done, so do not PANIC, that's how tattoos heal.
